

UFO³

UFO³

From Serrature Meroni, the European leader in van security locks for light commercial vehicles.

Quality, security and versatility at the highest level!

5-years warranty

Serrature Meroni offers an exclusive advantage for its customers worldwide: 5 years warranty on any manufacturing defects that make the product unsuitable for the specific application.

*15% cost saving!

UFO³ SMART, the entry level version, offers UFO proven security plus the convenient auto-locking feature, in addition to the incredible strength of HRC 52:54 hardened steel, at an unbeatable price.

*Over 30% faster to install

UFO³ can be installed in 30 minutes thanks to a universal kit that is compatible with all vehicles on the market. Installation is extremely quick and effective: 6 fixing points to the vehicle body and a hole for the emergency system that can be used to open the door from inside, both of the rear door and of the side sliding door. No vehicle body parts must be removed for installation.

The **patented system** used for unlocking from inside is highly innovative – independent of the lock and of the mechanism it drives – and minimizes any issue due to bodywork misalignments.

Fleet Service

Serrature Meroni provides a special service for large commercial vehicles fleets, leveraging the experience it has attained. Consultancy, inspections, training for installers, installation tools and accessories custom designed for all commercial vehicles on the market, are factors that result in shortening the installation time and ensuring that the installation is done according to best practices and high quality standards.

4 configurations in a unique design:

SMART

A **cost-effective** slam-lock. The radial pin cylinder - extensively tested in UFO - is available for the first time on a system that can be fitted to van doors in a practical, effective and strong manner.

SMART DUO

It adds an innovative feature to UFO³ SMART: the **key can be removed** both in the **"closed" position** in which it automatically locks when closing the doors, and in the **"open" position** in which the product security feature is not enabled - designed for those who need to protect their cargo only at specific times or places during the workday. In "open" mode the key does not need to be used with UFO³ DUO to open the door each time, and users can choose to leave the lock open or securely locked according to needs.

COMFORT

The evolution of UFO+ with a security cylinder and an extremely practical and robust reversible key. The **ideal system for intensive daily vehicle use**, involving frequently doors opening. The incredible strength of HRC 52:54 hardened steel and the **cylinder dust cover** make UFO³ COMFORT a new benchmark product for the sector.

EXPERT (powered by Kaba)

The top in security van locks sector: its core is Kaba's high security cylinder "experT pluS", with 23 pins, anti-picking, anti-impressioning and anti-drilling certified, and featuring a key profile patented exclusively for Serrature Meroni, and that is impossible to duplicate. UFO³ EXPERT comes with the cylinder dust protection, for total reliability even in extreme environments.
